## Exam

Midterm Exam due Dec 6, 2023 19:00 +07

Question #674b3e

1/1 point (graded)

What is the intent action to open a web page?

- Intent.ACTION\_ACCESS\_INTERNET
- Intent.ACTION\_WEB\_VIEW
- Intent.ACTION\_MAIN
- Intent.ACTION\_GET\_CONTENT
- Intent.ACTION\_VIEW

Submit

✓ Correct (1/1 point)

Question #865ffe

1/1 point (graded)

Which of following is wrong about implicit intent?

- To call implicit, you have to know the class name of the destination activity
- Android runtime will open the app chooser if there exists more than one candidate for the implicit intent
- Android runtime receive the requests and try to find the matched application
- Android runtime keeps list of application registering to run the implicit intent

Submit

✓ Correct (1/1 point)

Question #f1db78

1/1 point (graded)

An activity contains the following code in onCreate(). What will happen when this code is executed, if the intent property is null?

val message = intent.extras?.getString("message").toString()

- The app will not crash because the extras property is accessed safely using?.
- The app will crash because it attempted to access a null object.

You are taking "20231\_MobileProgramming\_Midterm\_Exam" as a timed exam. The timer on the right shows the time remaining in the exam. To receive credit for problems, you must select "Submit" for each problem before you select "End My Exam".

Submit
✓ Correct (1/1 point)
Question #f1d872
1/1 point (graded)
What is the purpose of implicit intent?
to close an activity in other application
to open an service in current application
o to open an activity in other application
to open an activity in current application
<b>✓</b>
Submit
✓ Correct (1/1 point)
Question #3811af
1/1 point (graded)
Overdiding the callback onSaveInstanceState is not suitable in which situation?
save some states of Activity and restore latter when there is a device configuration changed
save some states of Activity and restore latter when user rotates the device screen
save some states of Activity and restore latter when user changes the language of the device
store data into SD card to permanently use latter
Submit
✓ Correct (1/1 point)
Question #7df36e
1 point possible (graded, results hidden)
Which is a possible way/language to develop Android application?
✓ Native approach: Java/Kotlin
✓ Web-based approach
Universal Windows Platform (UWP) approach
Object C
✓ Flutter

You are taking " <u>20231_Mobil</u>	<u>eProgramming_Midterm_Exam</u> " a	s a timed exam. The timer on the ri	ght shows the time remaining in the exam
To receive credit for problem	s, you must select "Submit" for eac	ch problem before you select "End <mark>l</mark>	1y Exam".

Question #85f45a
1 point possible (graded)
Which of the following are true about abstract classes?
✓ They can be extended by subclasses and implementations can be provided for abstract members of the class.
They have an implementation for all of their properties and functions.
They may have abstract properties or abstract functions.
They can be instantiated.
They are not fully implemented and cannot be instantiated.
They need to be marked with the open keyword to be extended.
Submit

Question #2d341d
1 point possible (graded)
Both Toast and Logcat can be used to debug the program, which expression bellow is wrong?
Toast displays information at device while Logcat displays information at the host
Logcat only display information that developer logs out
Logcat can not be shown on computer without connection between the computer and the Android device
Toast can be used to display some guidelines for user
Submit
Question #8293fe
1 point possible (graded)
Which of the following is a benefit of using fragments?
✓ Navigation between fragments allows for more sophisticated user interface patterns, such as tab bars.
Using multiple fragments within an activity allows for an adaptive layout across multiple screen sizes.
✓ The same fragments can be reused across multiple activities.
Frragment is more lightweight than ACtivity sothat we should use Fragment rather than
Submit
Question #a55108
1 point possible (graded)
What is the advantage of Android development environment compare to iOS development environment?
the UI experience is better

You are taking "20231\_MobileProgramming\_Midterm\_Exam" as a timed exam. The timer on the right shows the time remaining in the exam. To receive credit for problems, you must select "Submit" for each problem before you select "End My Exam". Submit Question #b0491d 1 point possible (graded) Which of the following is true about Gradle? Gradle is an automated build system used by Android Studio to build your apps. Gradle handles installing your app on a device Your app's build.gradle file is written in XML. You can configure Android-specific options for your project in your app's build.gradle file. The gradle configuration for your project cannot change after you initially create the project. Submit Question #febc95 1 point possible (graded) Which of the following statements about app icons are true? It is sufficient to provide a single bitmap image of your app icon in your project to make it appear high quality on a range of Android devices. mdpi, hdpi, xhdpi, xxhdpi, and xxxhdpi are density qualifiers for resource directories to indicate that these are resources to be used on devices with a specific screen density. Adaptive icons are made up of a foreground and background layer, and an OEM mask will be applied on top of them. Vector drawables only work for a certain screen density and should not be scaled. Submit Question #8ba9db 1 point possible (graded) Suppose we have an image named "mobile.png" in the res/drawable folder, and we have an ImageView in the activity layout, which method could be used to set the image source for the ImageView as the image mobile.png setImageResource(R.id.mobile) setImageResource(R.drawable.mobile) setImageDrawable(R.drawable.mobile) setImageResource(R.drawable.mobile.png) Submit

Question #05bb2f
